1.6 Successful Registration of Green Trademark, Strengthening Identification and Promotion of Low-Carbon Products

To strengthen the identification and promotion of low-carbon products, CSAC designed a green trademark with sustainable implications and completed the registration on November 1, 2024. The trademark will apply to quality certificates of low-carbon products and made into stickers for product packaging to identify CSAC's low-carbon Aluminium products and demonstrate the company's commitment to carbon reduction and sustainable development.

The trademark design concept draws inspiration from nature, environmental protection, and sustainability. The "cloud-shaped" pattern symbolizes nature, the "green leaf shape" represents environmental protection, and the "earth and sustainable cycle" serves as the background of the trademark, with the "CSAC's trademark" added to the circular image.

Facing the global challenge of net-zero, CSAC will uphold the sustainable spirit of the green trademark and continue to develop more diverse high-end low-carbon Aluminium materials to achieve sustainable development goals.
