

ASI Environmental Policy

1. The nature, scale and environmental impact of all activities, products and services must comply with relevant laws and regulations and other requirements and commitments that must be followed.
2. Improve process and equipment, select clean fuel, and continuously reduce energy consumption and greenhouse gas emissions.
3. Recycle process waste, reuse resources, and reduce waste generation.
4. Improve wastewater treatment efficiency, reduce chemical use and sludge generation, and recycle water resources.
5. Add pollution prevention equipment to reduce air pollution emissions year by year.
6. Carry out process improvement and develop environmentally friendly green products.
7. Conduct soil and groundwater monitoring to effectively monitor environmental impact.
8. Through continuous education and training of all employees and environmental communication and audit, all employees, contractors and upstream and downstream manufacturers will jointly recognize the company's environmental protection issues and effectively affect neighboring residents.
9. Continue the 5S "sort, set in order, shine, standardize, self-discipline" activities to maintain a good working environment.
